## Electric Currents

### 电流

电流是单位时间内导线中通过的电荷

Amper 安培

$$i = \frac{\Delta Q}{\Delta t} = \frac{\sum_i q_i}{\Delta t}$$

以速度 $v$ 沿导线移动的线电荷

$$i = \frac{\Delta Q}{\Delta t} \rightarrow \frac{dq}{dt} \rightarrow \lambda \frac{dl}{dt} = \lambda v$$

$$\vec{I} = \lambda \vec{v}$$

$\lambda$  - linear density  
 $dq = \lambda dl$

表面电流密度 Surface Current Density

$$\vec{K} = \frac{d\vec{I}}{dl_{\perp}}$$

$$\vec{K} = \sigma \vec{v}$$

体积电流密度,  $\vec{J}$  Volume current density,  $\vec{J}$

电荷流动分布在一个三维区域,

$$\vec{J} = \frac{d\vec{I}}{da_{\perp}}$$

$$\vec{J} = \rho \vec{v}$$

$$i = \int (\vec{J} \cdot \hat{n}) dA$$

### Summary of currents

$$i = \frac{\Delta Q}{\Delta t} \quad \text{Units [A]}$$

$$\vec{I} = \lambda \vec{v} \quad \text{[A]}$$

$$\vec{K} = \sigma \vec{v} \quad \text{[A} \cdot \text{m}^{-1}]$$

$$\vec{J} = \rho \vec{v} \quad \text{[A} \cdot \text{m}^{-2}]$$

## Current as flux of volume current

### 电流为体积电流的通量

通过任意表面的总电流是通过该表面的体积电流的总通量:

$$\int_A (\vec{J} \cdot \hat{n}) dA = i$$

## 是什么推动产生了电流?

电场力

$$\vec{F}_E = q \vec{E}$$

施加在每一个电荷上的电场力

$$\vec{f}_E = \frac{\vec{F}}{q} = \vec{E}$$

所以

电导率

### conductivity

(do NOT confuse it with charge surface density)

$$\vec{J} = \sigma \vec{f}_E = \sigma \vec{E}$$

## Ohm's Law

### 欧姆定律

$$i = \frac{V}{R}$$

zz

$$R = \frac{L}{\sigma A}$$

length  
conductivity  
area

电流会变大吗?

## Joule's Law

### 焦耳定律

$$p = \frac{\Delta W}{\Delta t} = \frac{Q \Delta V}{\Delta t} = i \cdot V_{21} = i^2 \cdot R$$

## Electromotive force ( $\mathcal{E}$ , emf)

### 电动势

$$\oint \vec{f} \cdot d\vec{l} \equiv \mathcal{E}$$

$$\mathcal{E} = V$$

## Summary

### Current

$$\int_A (\vec{J} \cdot \hat{n}) dA = i$$

### Ohm's Law

$$\vec{J} = \sigma \vec{E} = \sigma \frac{\vec{F}}{q} = \sigma \vec{f}$$

### EMF

$$\oint \vec{f} \cdot d\vec{l} \equiv \mathcal{E} = V$$
